

Open Joist 2000 Floor Trusses

Date: October 1999

Revised:

Manufacturer: Consolidated Lumber & Truss Co.

1.) Open Joist 2000 are designed to perform at a level of strength greater than solid lumber, wooden I-joists or steel plated floor trusses.
2.) A unique assembly method of finger joinery and waterproof glue welds joist components together and creates connections that are actually stronger and more resilient than the wood around them.
3.) Feature a wide (2-1/2") nailing surface so the subfloor is more securely fastened and open webs that make possible the installation of electrical wiring, plumbing and heating duct without cutting floor joists.
4.) No defective material as every floor truss is tested to more than twice is required capacity before leaving the factory.
